

Product Information:

AIRFORCE EP22 AIRLINE OIL

Description:

Airforce EP22 is a premium quality, low viscosity airline oil, specifically designed for the lubrication of air tools. It has a low pour point and special additives to protect against rust, corrosion and water washing. This grade also has excellent anti-wear and EP properties, providing component protection in the most demanding of systems. Airforce EP22 contains a vital antifogging agent to maintain a healthy working environment and an antifoamant to facilitate the rapid release of air from the oil. A special tackiness additive improves lubrication in more severe working conditions.

Features:

- Excellent anti-wear and EP properties
- Excellent Resistance to oxidation and thermal degradation
- Superior mist-forming properties
- Excellent demulsibility characteristics
- Low Carbon and deposit forming tendency
- Distinct colour for ease of identification

Applications:

Recommended for air tools of all types including road drills, jack hammers, air speed saws and torque wrenches. Also recommended for air motors and the lubrication of pneumatic rams and cylinders. Can also be used for general lubrication in industrial applications.

Physical Characteristics:

Appearance	Red liquid
ISO VG Grade	22
Density	0.882
Closed Flash Point (°C)	170
Viscosity at 40°C (cSt)	22.8
Pour Point (°C)	-50
Copper Corrosion	1a (ASTM D130)
Rust Preventing Characteristics	Passes A & B phases

Figures based on average production values.

Part No.s: AEP001, AEP005, AEP025

(TDS Airforce EP22 – 101215 Issue 2)
